Automatic Digital Direction Finder

MODEL TD-L2200

FEATURES

Automatic Digital Direction Finder, model TD-L2200 is the succeeding model of our good reputation DF, TD-L1100. In addition to succeeding in all function of previous model, TD-L2200 adopts double super heterodyne for its receiving system and can output its bearing and receiving data with NMEA0183 format (on option). It provides clear and stable audio output even its smaller main unit compared with former one. Up to 100 channels memory for spot reception are helpful and users are free from repeating input operation of spot channels.
